

OLX & CFH Token Ecosystem Whitepaper

Built on the XRP Ledger — Proprietary Trading Operations & Revenue Sharing

Version 2.0 — June 2026 — @Trader_Oli_Club

1. Introduction

This whitepaper outlines the OLX and CFH token ecosystem — an automated revenue-sharing project built natively on the XRP Ledger (XRPL). The system is designed to reward users who contribute liquidity and long-term commitment to the ecosystem, generating real, verifiable returns distributed monthly on-chain.

Unlike speculative projects, OLX and CFH are backed by a proprietary trading bot that operates on the XRPL, generating daily XRP profits. A portion of these profits is redistributed every month to qualifying OLX LP providers and CFH holders — all transactions publicly verifiable on-chain.

2. Tokens Overview

OLX (OLIXRP)

- Primary utility: providing liquidity on the OLX/XRP AMM pool earns monthly XRP distributions and CFH rewards.
- Deflationary supply: every transaction on horizonxrpl.com triggers an automatic token burn, permanently reducing circulating supply.
- NFT Governance: OLX NFT holders (5,589 sold out) hold governance rights and community voting privileges.
- OLX LP providers receive monthly XRP redistribution on the 15th of each month.

CFH (Crypto For Holders)

- CFH represents digital equity in the OLX ecosystem — holding it earns a share of monthly trading bot revenue.
- CFH is distributed monthly (825,000 CFH/month) to all qualifying CFH holders and OLX LP providers over a 5-year program.

- Simply holding CFH qualifies wallets for monthly XRP + CFH distributions on the 15th.
- Total supply: 990,000,000 CFH — majority held by the development team for bot operations and ecosystem stability.

3. Proprietary Trading Operations

At the core of the OLX/CFH ecosystem lies a proprietary automated trading bot operating continuously on the XRPL. These operations have been active and profitable every single day since May 25, 2026, generating consistent XRP returns that fund the ecosystem's monthly distributions.

All bot activity is publicly verifiable on-chain — no trust required. The bot wallet addresses are publicly visible and all transactions are traceable on the XRPL.

Weekly performance reports are published publicly every Monday on X (@Trader_Oli_Club), Discord, and YouTube, including XRP generated, pool sizes, APY, and reinvestment amounts — all verifiable via transaction hashes.

Past performance does not guarantee future results. The development team is committed to full transparency through weekly on-chain reporting.

4. OLX Token Utility

OLX is the foundation of the ecosystem's liquidity layer. Its primary utility is:

- Providing liquidity on the OLX/XRP AMM pool earns monthly XRP distributions on the 15th of each month.
- OLX LP providers participate in the 825,000 CFH/month distribution program (over 5 years), alongside all qualifying CFH holders.
- OLX has a deflationary supply mechanism — every transaction on horizonxrpl.com automatically burns a portion of tokens, permanently reducing supply.
- OLX NFT holders (5,589 sold out) have governance participation rights in ecosystem decisions.

The OLX LP position is the gateway to the full ecosystem: LP on OLX → earn CFH → hold CFH → receive monthly XRP revenue share.

5. CFH Token Utility

CFH functions as digital equity within the OLX ecosystem. Holding CFH entitles wallets to a monthly share of revenue generated by the proprietary trading bot, distributed in XRP.

CFH is earned by OLX liquidity providers, rewarding long-term commitment to the ecosystem. To be eligible for revenue sharing, holders must maintain their CFH position for at least one full month, discouraging short-term speculation and promoting sustainable participation.

- Holding CFH = XRP + CFH distributions on the 15th of each month.
- The 825,000 CFH/month program applies to all qualifying CFH holders and OLX LP providers.
- Exiting any CFH or OLX LP position during the month forfeits that month's eligibility.
- A 5-day grace period applies between the 15th and 20th — wallets establishing or maintaining their position during this window remain eligible for the following month's distribution.

6. Revenue Sharing Mechanism

Revenue is generated daily by proprietary trading operations on the XRPL. A portion of monthly net bot profits — not just swap fees — is distributed in XRP to qualifying wallets on the 15th of each month.

The exact distribution amount is determined monthly by the development team based on bot performance and ecosystem needs. Distributions are not fixed — they reflect real, verifiable performance. All distribution transactions are published publicly with on-chain proof.

The revenue sharing process follows four steps:

- CFH tokens are earned by providing liquidity on the OLX/XRP AMM pool.
- CFH tokens must be held for one full month (or acquired before the 20th for the following month).
- Selling CFH or exiting the OLX LP position during the month results in no rewards for that month.
- XRP revenue is distributed monthly on the 15th to all qualifying CFH holders and OLX LP providers.

7. Tokenomics

CFH Supply Distribution

Allocation	Amount	Purpose
Development Team	~82%+ of supply	Bot operations, LP positions, ecosystem stability
5-Year Distribution Program	49.5M CFH	825,000 CFH/month to all qualifying CFH holders and OLX LP providers over 5 years
Circulating Supply	~10% (~99M CFH)	Held by active community members — OLX LP providers and CFH holders acquired through participation or open market

Future Distribution	49.5M–99M CFH	Potential additional release over following 5 years (market-dependent)
---------------------	---------------	--

The ~10% circulating supply (~99M CFH) represents tokens held by active community members — OLX LP providers who earned CFH through the monthly distribution program, and participants who acquired CFH on the open market. This portion is actively participating in the ecosystem's revenue sharing mechanism.

825,000 CFH per month is distributed to OLX LP providers over a 5-year program (49.5M CFH total). This monthly distribution began in 2025 and runs through 2030, creating a long-term, predictable incentive for ecosystem participation.

OLX Supply

- Total initial supply: 10,000,000 OLX.
- Deflationary: every horizonxrpl.com transaction auto-burns OLX, permanently reducing supply.
- Current circulating supply: ~9.42M OLX (580,000+ already burned).

8. Transparency & Reporting

The OLX/CFH ecosystem is built on radical on-chain transparency. Every claim made in this whitepaper is verifiable by any participant using publicly available XRPL blockchain data.

- Weekly performance reports published every Monday on X (@Trader_Oli_Club), Discord, and YouTube.
- All pool injections shared publicly with transaction hashes in dedicated Discord channels.
- The dedicated operations wallet address is publicly visible — all activity traceable on-chain.
- AMM pool data (real XRP, APY, volume) verifiable in real time on xrpl.to.

This level of transparency is intentional. In a space where trust is earned, not given, we let the blockchain speak for itself.

9. Roadmap & Sustainability Strategy

The OLX/CFH ecosystem is built for long-term sustainability through a self-reinforcing flywheel:

- Proprietary trading operations on the XRPL generate daily XRP profits.
- A portion of profits is reinvested into the AMM pools daily, growing pool depth and enabling larger bot orders.
- Larger pools allow larger bot orders, generating more trading volume and bot profits.
- More bot profits = more XRP available for monthly distributions to holders and OLX LP providers.
- More distributions = more demand for OLX and CFH, attracting new LP providers and deepening liquidity further.

It is important to note that monthly XRP distributions come from a portion of the trading bot's net profits — not solely from AMM swap fees. This distinction ensures that distributions remain meaningful and tied to real, verifiable trading performance.

Future developments may include community governance expansion and new XRPL AMM pool strategies — all aimed at increasing sustainable value for long-term participants. The OLX NFT governance council (up to the maximum permitted number of active members) will be consulted on major ecosystem decisions.

10. Target Audience

There are two ways to participate in the OLX/CFH ecosystem. Both options deliver the same core rewards — XRP + CFH every 15th of the month. The difference is simply how you get there.

	■ CFH Holder	■ OLX LP Provider
How to participate	Buy CFH on the open market and hold it	Provide liquidity on the OLX/XRP AMM pool
Effort	Minimal	Moderate
XRP every 15th	YES	YES
CFH every 15th	YES	YES
AMM pool benefits	No	YES — swap fees + LP position appreciation

Both paths lead to the same monthly rewards. CFH holders enjoy a zero-friction experience — buy, hold, collect. OLX LP providers access the same rewards plus the natural advantages of AMM liquidity provision: swap fee capture and LP position growth over time.

This ecosystem is not designed for meme coin traders or short-term speculators. It rewards commitment, liquidity, and long-term participation.

11. Conclusion

The OLX and CFH ecosystem represents a new model for sustainable token projects on the XRPL: real revenue, real transparency, real distributions. Powered by a proprietary trading bot that has been profitable every day since launch, the ecosystem generates verifiable returns distributed monthly to committed participants.

With a 5-year CFH distribution program (825,000 CFH/month), a deflationary OLX supply, a sold-out NFT collection with governance rights, and weekly public performance reports, OLX and CFH offer a unique combination of passive income, community governance, and long-term value creation on the XRPL.

We don't ask you to trust us. We give you the transaction hashes and let you verify everything yourself.

This whitepaper is for informational purposes only and does not constitute financial advice. Past performance of the trading bot does not guarantee future results. Participation in the OLX/CFH ecosystem involves risk. Always conduct your own research.
